Full-Stack Software Engineer

My Favorite Stack

Backend: Java / Spring / Kotlin
Frontend: React / TypeScript / Tailwind
Data: SQL / Flyway / Hibernate
DevOps: Docker / Kubernetes / Helm
Other: GCP, PostHog, AI integration

I love to discover new technologies. I am training on emergent ones forming myself on my personal apps.

Language

- French (native)
- English (C1)

Soft Skills

- Fast learner on complex systems.
- Clear Communicator, both in person and remotely.
- Overall vision of a product.
- Enjoy knowledge-sharing with teammates.

Interests

- Design and App Development
- General Culture
- Running
- Cooking with Plan Appétit ;)

Arthur Couturier

Professional Experience

Plan Appétit | Solo Founder 2025-2026

I founded Plan Appétit - a meal-planning & AI recipe-generation app, driven by the desire to understand challenges at every stage of a full tech product lifecycle. Thus, I designed, built and shipped the full product end-to-end as a solo founder, reaching thousands of users.

Full-stack development with Kotlin / Spring Boot, React, TypeScript, Backend running on a Kubernetes hosted on a VPS I deployed, Capacitor for mobile versions. Ran targeted Meta Ads campaigns to drive the user acquisition.

OpenAirlines | Data Engineer (Freelance) 2025 - ref: Benjamin Malbrel

3 successive contracts in this fuel efficiency company helping airlines to save fuel. Developed and maintained the Data Integration pipeline. Member of the Off Cycle team in a Shape Up agile context. Resolved production incidents through in-depth SQL analysis and optimized data-processing algorithms. Worked daily with international teams (mostly in Asia and Americas) to fix client-reported bugs and ship new custom-made features.

Telespazio (Thales) | Data Engineer (Freelance) 2024 - ref: Loïc Dubois

Telespazio is a Franco-Italian Thales group company working in the Space-observation industry. I architected and developed a large-scale Data Integration solution involving multi-sources data import, chained custom algorithms, formatting, storage and delivery of pipeline outputs. Owned the work end-to-end from architecture to production. Pipeline developed using Java / Spring, custom algorithms in Python, deployment on a hosted Kubernetes in a secure environment, storing data with OpenSearch. Collaborated with other engineering teams in an international Scrum context (mostly with an Italian team in English).

Lyra Network | Back-End Engineer (Fixed-term) 09/2022 - 2023 - ref: Émilie Rapicault

I worked in the e-commerce department of this payment service provider company. I led the migration of payment solutions from JBoss to Spring Boot, ensuring a smooth transition and improved overall system performance so the transition can be transparent for all customers using the payment mean on which I worked. I contributed to a broader codebase-modernization effort, working in a Scrum agile context.

Education

ENSEEIHT - Toulouse INP - Engineering Degree (MSc level) 2020 - 2023

CPGE (preparatory classes) - Victor Hugo, Besançon 2018 - 2020

Baccalauréat S highest honours (european section) - Sainte-Marie Belfort 2018
